

JOB SHIPMENTS

The Job Shipments add-on module enables you to ship jobs to an unlimited number of ship-to addresses, updates the job with the quantity actually shipped, and produces a variety of shipping documents including shipping labels, delivery tickets, and packing slips. In addition, it is integrated with job overages, to warn the Shipping department about shipments of more job overages than the customer will pay for, and is integrated with the credit facilities to prevent shipments for customers on credit hold.

This module offers you these features and benefits:

- Integrates with ePace customer data to automatically complete Ship To fields when you select a customer contact.
- Enables you to set up job status codes so you can easily locate any shipment at any time.
- Supports multiple shipment types, such as
- “Proof Out” or “Partial Ship” and allows you to create your own shipment types.
- Allows you to quickly locate shipment information with a search tool.
- Offers you quick and easy access to your shipping labels and delivery tickets.

The Job Shipment Detail Screen

FreightLink

The FreightLink module is a separate **add-on module** that enables you to import shipping charges and tracking numbers from shipping providers (such as UPS) directly into ePace. With this module you can update job shipment records with tracking numbers and actual costs of freight from your UPS computer. You can also map directly to ePace from your shipping provider Web site. FreightLink also supports batch exports from your shipping provider software into a Microsoft Excel™ file.
